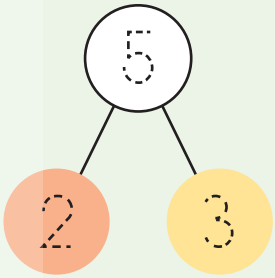
Subtraction Stories
Practice 18: Worked Example

Fill in the blanks.

There are 5 fish in all.

There are 2 .



There are 3 goldfish.

Copyrights of Singapore Math Inc.

Teaching Hints: Ask students how many fish there are altogether and how many are angelfish. Guide them in filling in the blanks in the first two sentences. Have them create a train of 5 cubes. Tell them we want to find the number of goldfish. Have them break off 2 linking cubes to show the 2 angelfish. Ask them how many linking cubes are left. Guide them in filling in the number bond, equation, and answer sentence.

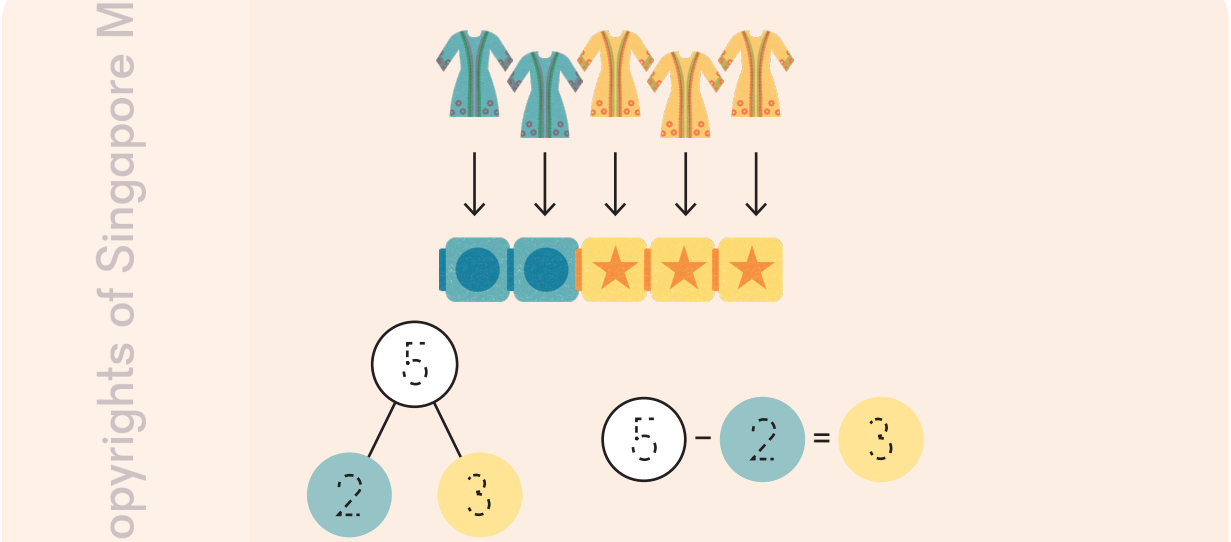
Part-whole Model (Take Apart)
Practice 23: Worked Example

There are 5 dresses.
2 dresses are blue.
How many yellow dresses are there?



There are 3 yellow dresses.

Teaching Hints: Ask students how many dresses there are altogether. Have them build a train of five linking cubes. Read the story problem and ask students to remove two cubes from the train to represent the blue dresses. Then ask how many cubes remain, representing the yellow dresses. Guide students in completing the number bond, equations, and answer sentence.
