| 70 | Answers to textbook page. 63, 8 | There is something wrong with the problem. The syrup must be pretty weak, or the problem meant to say that $1 / 3$ of the lemonade consists of syrup. If so, the answer is correct. However, if $1 / 3$ of it is water, then the syrup is $a / 4 \times 2 / 3=a / 6$. Or, subtract from the fraction that is water, $a / 4-a / 12=a / 6$. |  |
